

### Strength

- The video tutorial on creating a home page indicates clearly the QM Standards that are followed in creating the home page.
- It has many features in allowing a You Tube embedded video to be used as a welcome message.
- Embedding a You Tube video is easier in Canvas compared to D2L.

### Weakness

- As an instructor, posting an examination in Canvas is unsecure unless the learning management system is securely linked to the University's web page.
- Uploading the instructor's photo has some limitations. The photo size should be small. This limitation also exists in D2L.

### **LMS TOOLS COMPARISON AND QUALITY MATTERS COMPARISON**

In reality both management systems tools should provide the instructor with same results. For this week's tools, I was very pleased with the use of tools in Canvas compared to D2L. I felt that the D2L tools I had to follow a number of steps. In Canvas it was short and clear.

### **LMS RECOMMENDATION**

I recommend Canvas to be used as the management system. In terms of video recording, both the LMS performed at the same standard. In terms of software licensing, Canvas offers an open source whereas D2L is a closed source which requires a lot of money to register for the system. Another benefit of Canvas is that since it is the new management system, it will try to offer better functionality and improve areas which D2L had weakness.
